

# Chess Game | User Guide

The game is a basic version of well known game of chess.

To move a piece, click on it. when it's selected, it will be highlighted in white. Then click the square where you want it to go. If the move is valid, the piece will move . If not, nothing changes and you can try again.

Pawns may move two squares on their first move, and you can capture en passant immediately afterward. To castle, click your king and then click two squares toward one of your rooks, provided neither has moved and the path is clear. When a pawn reaches the far side, a window appears, where you can choose a Queen, Rook, Bishop, or Knight for the pawn's promotion.

Use **Save** at any time to record your game in `save.json`. Reopening the app automatically load the game that you saved the latest.

When a king is checkmated, or the game ends in stalemate or insufficient material, a message will appear and all pieces will be locked until you click **Restart** to begin a new game.
